In computer science, artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and other animals. Computer science defines AI research as the study of "intelligent agents": any device that perceives its environment and takes actions that maximize its chance of successfully achieving ...

This blog considers two recent papers on the dynamics of scientific research: one in Nature and one by the brilliant physicist, Michael Nielsen, and the brilliant founder of Stripe, Patrick Collison, who is a very unusual CEO. These findings are very important to the question: how can we make economies more productive and what is the relationship between basic science and productivity?
