Occupations At Risk. A study in the American Journal of Respiratory and Critical Care Medicine estimates that at least 1.3 million construction industry workers are still at risk for occupational asbestos exposure. Especially at risk are demolition workers who create and dispose of contaminated debris.

The adoption rates of the optional IEQ credits in LEED NC 2009 give an indication of how building owners are prioritizing certain aspects of IEQ. We extracted the data and found that the vast majority of projects obtain credits for low-emitting adhesives, paints and flooring systems (). Increased ventilation is much less widely adopted, despite strong evidence for health and performance ...

Reflective surfaces can deliver high solar reflectance (the ability to reflect the visible, infrared and ultraviolet wavelengths of the sun, reducing heat transfer to the surface) and high thermal emittance (the ability to radiate absorbed, or non-reflected, solar energy). Reflective surfaces are a form of geoengineering.. The most well-known type of reflective surface is the "cool roof".

1. Introduction. Bivalves are the second largest phylum of animals after the arthropods with about 200,000 extant species (Runnegar, 1996). Bivalves, characterized by remarkable anatomical and structural dissimilarities between the species, share collective characteristics including a soft, unsegmented body consisting of a muscular foot, a visceral mass, and a mantle (Pechenik, 2000).

Adhesion and bonding. DuPont recommends starch, dextrin, casein, and animal-based adhesives over most synthetic-based adhesives, emphasizing the effectiveness of water-based and quick-drying glues as the best for bonding Tyvek both to itself and to a variety of substrates. DuPont also claims that the following adhesives are highly effective: . Water-based synthetic lattices

Plastics contamination in the marine environment was first reported nearly 50 years ago, less than two decades after the rise of commercial plastics production, when less than 50 million metric tons were produced per year. In 2014, global plastics production surpassed 300 million metric tons per year. Plastic debris has been detected worldwide in all major marine habitats, in sizes from ...
