As soon as I have found a proper solution for this issue I will update this article. Set your work week in a Month View Same procedure as above: Create a new view, name it "Month - Work Week" (MonthWorkWeek.aspx) and insert a Content Editor Web Part.

Show Work Week only / Disable Weekends in a SharePoint

I'm fairly new to SharePoint, and had this same problem. I had a user who had access to the site via AD group permissions. I searched for a solution like this, but being new to SharePoint I ended up manually adding the user to the site with read access, then removing the user (again, allowing her AD permissions to take over).

Updating SharePoint 2010 User Information – SharePoint

In SharePoint 2010 Essential Training, author Simon Allardice demonstrates the full feature set in SharePoint 2010 and the necessary skills to be a SharePoint site administrator. The course shows how to use SharePoint, create sites and site collections, and plan and design sites and portals. It also covers Office integration, security and permissions, and advanced features such as document ...

History. Microsoft had previously ventured into music services with its Zune brand. The Zune Music Marketplace included 11 million tracks. The line of Zune players and Zune music store were somewhat unsuccessful, and the brand was largely discontinued at the beginning of the 2010s, although it continued to exist on different devices and the Zune Music Pass offered unlimited access to songs for ...

Manning | Learn Windows PowerShell in a Month of Lunches

For conditional statements or loops, you have to compare values to control the progress of the script. Like all modern scripting languages, PowerShell supports if/else, switch, and the corresponding comparison operators. However, PowerShell differs here from other popular programming languages for Windows and the Web.

PowerShell comparison operators -eq, -lt, -gt, -contains

Consider the following scenario: We need to run some PowerShell on the Windows Server 2012 R2 member server named mem2 from our local server named dc1. Because mem2 resides on a high-security subnet, we can't access mem2 directly. We'll use adfs1 as a "jump box" because adfs1 is allowed to ...
