724 Unit 6:Space Science The Moon's position in its monthly orbit determines how it appears from Earth. The diagram on page 725 shows how the positions of the

KEY CONCEPT Positions of the Sun and Moon affect Earth.

While survey findings typically vary depending on the sample studied and the exact questions asked, these findings are broadly in keeping with studies of earth science and climatology specialists.

Attitudes and Beliefs on Science and Technology Topics

Earth is the third planet from the Sun and the only astronomical object known to harbor life.According to radiometric dating and other sources of evidence, Earth formed over 4.5 billion years ago. Earth's gravity interacts with other objects in space, especially the Sun and the Moon, Earth's only natural satellite.Earth revolves around the Sun in 365.26 days, a period known as an Earth year.

Global warming is a long-term rise in the average temperature of the Earth's climate system, an aspect of climate change shown by temperature measurements and by multiple effects of the warming. The term commonly refers to the mainly human-caused observed warming since pre-industrial times and its projected continuation, though there were also much earlier periods of global warming.
