Biochemical engineering also bioprocess engineering, is a branch of chemical engineering or biological engineering that mainly deals with the design and construction of unit processes that involve biological organisms or organic molecules, such as bioreactors. It has various applications in many areas of interest such as biofuels, food, pharmaceuticals, biotechnology, and water treatment processes.

Biochemistry, sometimes called biological chemistry, is the study of chemical processes within and relating to living organisms. Biochemical processes give rise to the complexity of life.. A sub-discipline of both biology and chemistry, biochemistry can be divided in three fields; molecular genetics, protein science and metabolism. Over the last decades of the 20th century, biochemistry has ...
