Abiogenesis, or informally the origin of life, is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but a gradual process of increasing complexity that involved molecular ...

Monophosphan, umgangssprachlich etwas unpräzise als Phosphorwasserstoff oder veraltet als Phosphin bezeichnet, gehört zur Gruppe der Phosphane. Monophosphan ist eine chemische Verbindung des Elements Phosphor mit der Summenformel PH₃. Es ist ein brennbares, äußerst giftiges, im reinen Zustand geruchloses Gas. Reines Monophosphan ist erst bei 150 °C selbstentzündlich.

The COD effectively is a measure effort the amounts of electrons available in the organic carbon for reduction of oxygen to water. TOC is the amount of carbon.

What is a relationship between TOC and COD?

W zwykłej temperaturze jest mało aktywna. Bardzo łatwo łączy się tylko z fluorem, trudniej z chlorem. Z innymi pierwiastkami, jak np. z wodorem, łączy się dopiero w podwyższonej temperaturze. Z metalami tworzy po ogrzaniu siarczki, przy czym reakcje te są silnie egzotermiczne, w konsekwencji zapoczątkowana reakcja syntezy przebiega dalej samorzutnie nieraz z rozparzeniem mieszaniny.
