Curium is a transuranic radioactive chemical element with symbol Cm and atomic number 96. This element of the actinide series was named after Marie and Pierre Curie – both were known for their research on radioactivity. Curium was first intentionally produced and identified in July 1944 by the group of Glenn T. Seaborg at the University of California, Berkeley.

Nuclear fuel is material used in nuclear power stations to produce heat to power turbines. Heat is created when nuclear fuel undergoes nuclear fission. Most nuclear fuels contain heavy fissile actinide elements that are capable of undergoing and sustaining nuclear fission. The three most relevant fissile isotopes are Uranium-233, Uranium-235 and Plutonium-239.

This article is a rebuttal to the article Modern Medicine Has Given Illness Care a Miss by Dr. B.M. Hegde in the Open Page of The Hindu, dated February 18th, 2012. (The piece is in fact recycled from this almost identical piece by him from November 2010.). Dr. Hegde begins his article with some quotations by famous people, and offers them as evidence that medicine in the past was better than ...

A Response to Dr. B.M. Hegde's Article in The Hindu | Nirmukta

I am very scared after I've read all the post on this site about TMS treatment and finding out 99% of the post on this site state that TMS did nothing or made symptoms worse.
