AND DESIGN ANALOG CIRCUITS AND SIGNAL PROCESSING**

### **noise shaping all digital pdf**

Image noise is random variation of brightness or color information in images, and is usually an aspect of electronic noise. It can be produced by the sensor and circuitry of a scanner or digital camera. Image noise can also originate in film grain and in the unavoidable shot noise of an ideal photon detector. Image noise is an undesirable by-product of image capture that obscures the desired ...

### **Image noise - Wikipedia**

Noise reduction is the process of removing noise from a signal.. All signal processing devices, both analog and digital, have traits that make them susceptible to noise. Noise can be random or white noise with an even frequency distribution, or frequency dependent noise introduced by a device's mechanism or signal processing algorithms.. In electronic recording devices, a major type of noise is ...
