Tracheal intubation, usually simply referred to as intubation, is the placement of a flexible plastic tube into the trachea (windpipe) to maintain an open airway or to serve as a conduit through which to administer certain drugs. It is frequently performed in critically injured, ill, or anesthetized patients to facilitate ventilation of the lungs, including mechanical ventilation, and to ...

AS EARLY AS 1941, young children undergoing anesthesia and surgery have been described as having significant emotional reactions following their surgical experience (Pearson, 1941). Fear of separation, loss of control, unfamiliar routines, instruments, and environment were all sources of children's negative reactions (Corman et al., 1958, Vernon et al., 1965).
