Introductory Econometrics: A Modern Approach

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

where Π it and FI it are the vectors representing the informal and formal factors, respectively, and x it is the controlling vector that influences opportunity entrepreneurship in country i at time t . The vector of control refers to the economic growth rate. The relationship between economic growth and entrepreneurship is not new and a feedback effect is thought to exist between the two.
